Accurate placement of the Leveling Leg is important for the stability of the cabinets and insures that the optional Toe Kick panels will be positioned correctly.

**Required Parts**

- 4 Leveling Legs per cabinet
- Mounting Plates and Clips
- Provided Installation Screws

**Required Tools**

- Level
- Tape Measure
- Phillips Screwdriver
- Pencil
For easier handling – remove the doors & drawers. Adjustable shelves are packed separately. Do not install them until the legs are attached and all the cabinets are installed and levelled.

1. Unclip the back of the hinges to remove the doors.

2. Pull the drawer out until it stops. Each drawer runner has a small plastic release tab. One tab will point up and the other will point down. Holding the drawer box on each side, push the tabs in the opposite direction from which they’re pointing and carefully pull the drawer box out. Carefully push the runners back into the cabinet.

3. Using two or more people, place the cabinet upside down, on a protected surface.

4. Place the 2 front legs 3 5/8" from the front edge. Set the support plate over the end panel - 1/4" from the outer edge.
Leveling Leg Installation

5. Place the 2 back Legs at least 1” from the back edge. Set the support plate over the end panel - 1/4” from the outer edge.

6. With Legs in place, use a Phillips bit to install with supplied screws. DO NOT OVERTIGHTEN.

8. Using two or more people, carefully set the cabinet right side up on the legs.
You can adjust the Leveling Legs up or down to bring the cabinet to a level position. The cabinet may need to be adjusted front to back and side to side.

Leveling adjustment may be easier with two people. One person to verify / bring cabinet level and the other to adjust the legs up or down simultaneously.

After cabinets are level and plumb you can proceed with standard cabinet installation practices.

Once all cabinets are attached and installed, double check to make sure each of the Leveling Legs is adjusted to be firmly pressing against the floor. This will insure the cabinet weight is evenly distributed.
1. Lay the trimmed Toe Kick panel in front of the cabinet against the Leveling Legs. Mark the location of each Leg on the back of the panel. Clips are not needed on all Leg locations, but enough for a secure hold.

2. Center the Clip Plates half way up the height of the panel, screw into place. Then slide a Clip into each Plate.

3. Align the Panel and push the clips onto the Legs.

If applying Toe Kick around corners, adjacent panels will clip to the same corner Leg. Be sure to stagger the Clip Plate heights so they overlay properly.
